DETAILED ACTION

This communication is an Examiner's reasons for allowance in response to application filed on 08/05/2003, assigned serial 10/635,874 and titled "Method and Arrangement for Guiding a User Along a Target Path."

The following is the Examiner's statement of reasons for the indication of allowable subject matter:

As previously indicated in the Ex parte Quayle action mailed on 07/16/2004, the present application was set in a condition of allowance except for the deficiency of the specification. The applicant's amendment on 08/19/2004 indicates that the specification has now been amended. Thus, the application is now set in a condition for allowance.

The prior art closest to the subject matter of claims 1 and 12 is the reference of Tamai et al. (U.S. 5904728A) which discloses an apparatus and method for providing route guidance to vehicle user and the audio message provided to vehicle user before said user begin to turn to a specific road or a specific intersection. The reference to Tamai et al. is missing to disclose the features as claimed in claims 1 and 12.

It is found that none of the references, either alone or in the combination, teaches or suggests "An arrangement for guiding a user along a target path, comprising: relative-location determining means for determining the position of the user relative to the target path; and audio-cue means for providing respective audio cues to the user via left and right audio channels, the audio-cue means being arranged to cause these cues to be indicative of the relative position

determined by the relative-location determining means and to vary in a complementary manner over at least a range of values of said relative position without thereby forming a spatialized virtual sound source the position of which changes with the value of said relative position", "A method of guiding a user along a target path, comprising (a) determining the position of the user relative to the target path; and (b) providing respective audio cues to the user via left and right audio channels, these cues being indicative of the relative position determined in step (a) and varying in a complementary manner over at least a range of values of said relative position without thereby forming a spatialized virtual sound source the position of which changes with the value of said relative position".

The prior art does not contain any teaching that would lead a skilled person to modify the closest prior and thereby arrive at the invention. Therefore, the application is now set in a condition for allowance.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan C To whose telephone number is (703) 308-6273. The examiner can normally be reached on from 8:00AM to 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Black can be reached on (703) 305-8233.
